## Global Environmental Movement

Manufacturers of electronic products are required to meet Restriction of the use of Hazardous Substances Directives 2002/95/EC by 1 July, 2006. It affects 7 categories of products and the related supply chain. No matter big or small, component or product manufacturers, failing to comply will lose orders. If hazardous substance is found over the concentration limit, manufacturer will be prosecuted and fined. There is less than 12 months to comply. Do you understand this new game plan? How do you comply? You will find the solution in this article.

## New Opportunities in Green Manufacturing

China is named as the "World Factory". Billion dollars of electronic consumer products are exporting to European Community. The RoHS Directive brings along a new trading and technological barrier to small and medium electronic manufacturers in China. At the same time, it presents a new opportunity for those who have already complied. In combating the complex RoHS requirement, it is difficult to implement by using conventional paper based system or ERP. A stand-alone system may be required for this special situation.

In April, 2005, an alliance with world class test lab, inspection, quality management and consultant - Intertek, EPA Centre of City University of Hong Kong and Clever Motion Technology Limited was formed. The Alliance provides combined expertise in testing, inspection, procurement, product reliability, failure analysis, training, system audit and consultancy services. It is aimed to provide one-stop-shop services to manufacturers who wish to comply to RoHS requirement within the shortest time, lowest risk with reasonable cost.

Through years of research, applying industry best practice, innovative IT and workflow technology, the Alliance introduces an unique solution for the electronic industry. The new **RISE** (RoHS Information System for Enterprise) is born.

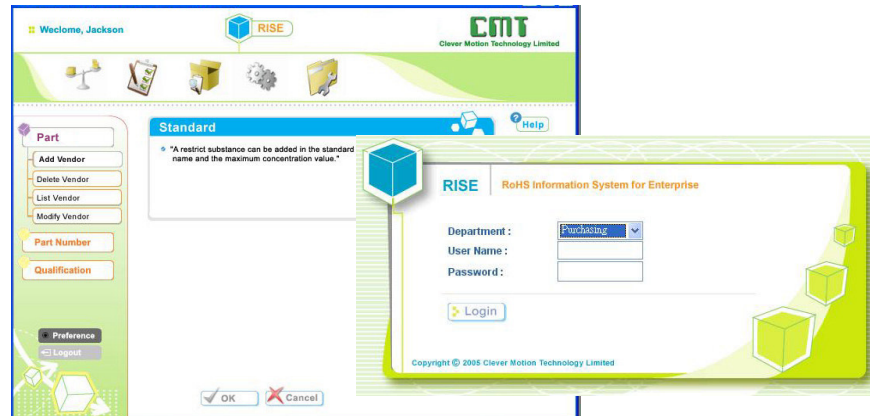

**RISE** is a stand-alone web-based application using robust middleware such as SuSe Linux Enterprise Server, Websphere, DB2 from IBM and Oracle database as the foundation. It provides reliable and automated solution with the best TCO and ROI to electronic manufacturers.

With our RoHS solution, you will have the following benefits and enjoy years of peace of mind in the ever-changing environmental requirements.

- comply with EU RoHS directives in the shortest time for the lowest cost
- gain an unprecedented competitive edge
- an uninterrupted business flow during the enforcement of such legislation

Fiddling around will walk across a lot of winding roads. Work with global organizations, adopt an effective solution will quickly elevate the industry standard of the enterprise. It will soon comply RoHS requirement and earn more orders.

Log in to RISE to Revitalize Your Business

The key modules are shown as following:

files**System Highlights :**

- Standalone web-based solution and easily integrated with existing ERP
- All you need to jump start RoHS compliant
- Comply to RoHS requirement and hold the key to orders
- Embedded with rich domain knowledge and best practice for RoHS compliant
- Tradition & Simplified Chinese with English user interface for easy to be used
- Ride on the best and proven hardware and software for stability and reliability
- Provide leasing arrangement for affordable installment

**Minimum System Configuration**

**Server** One way 3GHz Intel Pentium 4 Processor, 1GB RAM (2x512MB), 2x 73.4GB 10,000 RPM Ultra320 SCSI Disk Drive, Giga Bit Ethernet, DVD-ROM, Graphics Accelerator

**Operating System** SuSe Linux Enterprise Server 9 or equivalent

**Application Server** (Websphere, Oracle AS or equivalent)

**Database** (Oracle 10g, IBM DB2 or equivalent)
